The Power to Master Complexity

ARDEN

Engineering Constructors, LLC

A Safe Bet

One of the ways in which Arden measures project success is safety. We hold it in the highest esteem, making certain that every Arden employee – from our office staff to our trades people and subcontractors – understands it to be our first and top priority. We respect the men and women we employ, and all the people that come in contact with us. We have dedicated ourselves to ensuring those individuals return safely to their homes each and every night. This goal drives our uncompromising commitment to safety education and training.

It's No Accident

Safety and training can't just be talked about. We have carefully crafted it into our infrastructure in the following ways:

Our Safety Committee – Made up of outstanding volunteers, our committee members are dedicated to one goal; eliminating injuries and accidents. They do this by closely monitoring all projects, taking advantage of the latest safety advances and knowledge, and spreading their gained experience to every Arden team member on the workforce. Their tireless efforts have resulted in above-average job site safety records – a reward worth far more than the industry recognition that Arden has consistently received for its safety track record.

Continuous Improvement Program – Designed for both labor and management, these programs ensure that our already-masterful technicians are equipped with the latest procedures, technologies and code requirements. Knowing that efficiently managed sites correlate with safer environments, we look to impact our safety record in all aspects of our business. We are proud of the fact that all Arden field technicians have successfully completed several of the country's most rigorous industry courses. Arden believes in education, not just to keep pace with the industry, but to lead it.

Tool Box Safety Talks – What could be more proactive than regular meetings that convey the latest information, techniques and code requirements? Designed by Arden supervisors, this structured program for the continuous education of our team assures you that we set the bar high, and keep it there.

On-Site Cleanliness Protocols – We know that clean sites are safer sites so we work hard to ensure our construction footprint is clean, whether it's minimizing the dust from our own boots or maintaining the purity of the air around us. At Arden, we are able to maintain the environments that surround our work areas. From hospitals to manufacturing clean-rooms to commercial mechanical rooms, we do what is necessary to keep our sites safe for everyone.
